Avg Credit Score...

Recommendation: Increase the minimum approved credit score to **700**. This policy reduces the projected portfolio default rate from **24.3%** to **12.9%**, preventing **105 defaults** while maintaining approval for more than half of applicants. Although a threshold of **750** achieves a slightly lower default rate, it rejects **72** additional creditworthy borrowers to prevent only **14 more defaults**, making **700** the preferred balance between risk reduction and portfolio growth.
